

# WiFi Hotspot For Company Visitors

**WiFi Solutions (UK) Ltd** are specialists in providing wireless Internet access through a quality managed broadband connection in public locations. We are in partnership with Pipex a leading wholesale Internet Service Provider for over 10 years.

Become part of the wireless revolution and turn your premises into a WiFi Hotspot.

With LETSGOWIFI your customers have the freedom to connect to the Internet at high speeds without wires. Using a laptop or PDA that is WiFi enabled, you can download e-mail, Surf the Net or just keep up with your business in general.

We carry out a free site survey and simple check to ensure that your premises has ADSL capability. The equipment we use is sophisticated yet compact therefore unobtrusive.

You will be surprised to learn how low the cost is to provide wireless Internet access.

**M**any companies today have a complete IT infrastructure in place to support the demands of the modern business. Generally this will comprise of a set of desktop tools such as Microsoft Office, local area printing, e-mail and connection to a corporate network by means of a wide area network (WAN). This environment is fine for employees, but what about your visitors? By visitors we mean customers, suppliers, partners, indeed anyone who is not directly authorised to connect to your corporate network. We consider anyone outside your company (legal entity) to be a public visitor. Public access hotspots are a popular way for people to get online access when they are away from their home or office. WiFi Solutions (UK) Ltd can provide your organisation with wireless broadband internet access at popular meeting points such as on site conference room, boardroom or reception areas, where clients can check e-mail, or pick up those last minutes changes prepared back at the office. Offer this value added service to your customers or corporate directors and avoid unplugging the fax to provide a visitor with a slow data connection to their network. Our wireless Internet access solution will enable

different companies working to different standards to use their personal computer equipment with which they are familiar for connection to the internet. Many organisations also provide a secure VPN link for their travelling employees. Our service will enable your visitors to connect to their own corporate networks through this wireless link. Benefit by connecting from the comfort of the conference room chair, avoiding the need to run cables across the floor. With our solution each member of the meeting can work together whilst connecting wirelessly via the internet back to their own office to recover data, show presentations or host net meeting sessions. The list is endless. Many modern laptop computers and PDAs are now WiFi enabled giving your clients the freedom to connect wirelessly from your company premises.

Wireless Broadband Internet Access can be offered as a value added service to your customers/partners providing easy access to their own company facilities.

WHY  
WIFI  
SOLUTIONS (UK)

All this can be made  
available to your customers  
at surprisingly low cost.

**I**n today's world there are risks in allowing others onto your network. In most organisations this is not permitted. Typically this is for three reasons. Firstly the risk of allowing a virus onto your network from a PC which does not conform to your standards. Secondly, for the protection of your information. Thirdly, the risk of causing damage to information at a third party organisation (your visitors network) caused by a virus from your company.

#### Our solution provides you with a range of key benefits:

- ◇ Value added service to your visiting partners.
- ◇ Reduced set up time for a meeting giving you the opportunity to focus on the agenda and not technical problems.

#### Security

- ◇ Ensures your visitors are completely separate from your local systems.
- ◇ No risk of virus transfer between your organisations.
- ◇ Protects your property (Information) as visitors are not connected to your network.

#### Captive Portal

Once connected your visitors will be shown a pre-determined page of information. Simply show your company logo or just include information about your organisation:

- ◇ Key contact information, Opening times, H&SE information
- ◇ Advertise your products and services

#### Liability Protection (Captive Portal)

Aside from the above benefits the key reason for the captive portal is to force your clients through a login process before they are able to connect to the internet or their corporate networks. This process can be in the form of a guest user login or simple disclaimer. Either way, visitors must accept the disclaimer before they can proceed.

#### Easy Connection & Security

- ◇ Use of IP plug & play technology. This allows computer access to the internet without the need to change network settings. Often a problem for corporate users as PC setting may be fixed for their own company network.
- ◇ Secure Socket Layer (SSL) is activated during login providing encryption.
- ◇ Enhanced security Layer 2 Isolation is enabled. This prevents direct communication between visitors computers.
- ◇ Connection to their corporate network from your premises.

#### Why WiFi Solutions:

- ◇ Leading supplier of wireless public access internet hotspots in the North West
- ◇ We are in partnership with PIPEX, a leading internet service provider,
- ◇ **No** resale restrictions on ADSL broadband wireless connection. We have agreements to provide ADSL services for public hotspots
- ◇ Up to 8Mb services will be installed where capability exists.
- ◇ We use high quality equipment from a reputable manufacturer.

**The above features are critical for a successful public access WiFi walk-up Hotspot. Beware of suppliers who do not offer these services as standard**

#### Services we Provide:

- ◇ Captive portal hosting and management service. This includes the development and modification of portal pages.
- ◇ Reseller and Solutions provider for both wired and wireless Internet Access.
- ◇ ADSL, RADSL, SDASL and leased line solutions.
- ◇ Review existing services and identify cost saving benefits where they exist.
